# Animation Techniques

## Part 1

### 1 After Effects 101
An overview of the major user interface elements in After Effects, as well as how projects are organized. Includes tips on how to customize the user interface and save the resulting layouts as Workspaces.

### 2 Creating a Composition
Creating a new composition
A tour of the Comp and Timeline panels
Adding footage to a comp; the Layer panel
Managing multiple comps
Navigating in space
Solid layers
Resolution and Quality
Navigating and zooming in time; the work area
Safe areas, rulers, grids, and guides
Frame rate; displaying time
Channel switches; color picker; background color; alpha appearance

*Preview Possibilities* sidebar (Interactive and RAM previews; OpenGL)

### 3 Basic Animation
Position, including spatial keyframes and motion paths; keyframe types
Keyframe navigation; editing values numerically
Opacity values and keyframing
Scale values and keyframing
Rotation values and keyframing; 3D Orientation
Auto-keyframe mode; flip horizontal and vertical
Working with the Anchor Point; transitions, arcs, and orbits
Motion control moves
Keyboard shortcuts; keyframe tips
Quality issues; subpixel positioning; resampling

### 4 Keyframe Velocity
Easy Ease; Auto Bezier keyframes
Working with the Graph Editor; Value Graphs
Velocity (Speed) Graphs; editing velocity numerically
Coordinating multiple values; keyboard shortcuts
Position graphs
Separate X, Y, and Z; graph gotchas;
Hold interpolation
Roving keyframes

### 5 Animation Assistance
Keyframe tips and tricks; copying, nudging, and scaling motion paths
Layer Management

6 The Layer Essentials .............................................. 108
Selecting and moving layers .................................. 108
Duplicating, soloing, renaming, and replacing layers .... 110
Comp and layer markers ........................................ 112
Replacing footage; snapshots; Align panel; edit original; color-coding ........................................ 114
Beswitched sidebar (layer property switches in the Timeline panel) ........................................ 118

7 Trimming .............................................................. 120
Trimming in and out points; slip editing ..................... 120
Sequence Layers keyframe assistant .......................... 126
Trimming by work area ......................................... 127
Splitting layers .................................................. 128
Overlay and Ripple Insert Edits ................................ 130

8 Motion Blur and More ........................................... 132
Applying motion blur; Samples Per Frame and Adaptive Samples ........................................ 132
Shutter Angle and Phase; Blur and Masks .................. 134
Blur and nested comp; Render Settings ....................... 135
Echo-style effects; Cycore CC time effects ................. 136

9 Blending Modes ................................................... 140
Blending modes explained; applying blending modes .... 140
Overview and example of each mode ....................... 144

10 All About Masking ............................................... 156
Masking basics; creating simple masks; shortcuts for creating shapes ........................................ 156
Transforming masks; selecting mask points and segments ........................................ 160
Mask Feather, Mask Expansion, and Mask Opacity ........ 162
Creating and editing Bezier and RotoBezier masks ......... 164
Animating masks; mask velocity and blur; mask-animating advice ........................................ 167
Inverting masks; mask seams ................................ 172
Managing multiple masks; mask modes ...................... 173
Auto-trace ...................................................... 178
Rotoscopying advice ........................................ 179
Panning layers inside masks ................................... 180
Masks for effects ................................................ 182
Interchanging masks with other paths; Illustrator paths ................................. 182
Mask Interpolation keyframe assistant ................................................................. 186

11 **All About Track Mattes** ................................................................. 190
Mattes explained; luma versus alpha mattes ....................................................... 190
Inverting mattes; improving matte contrast ............................................................ 195
Choosing a matte channel ....................................................................................... 198
*Using the Set Matte Effect* sidebar ..................................................................... 200
Animated mattes; using parenting and null objects ............................................... 201
Mattes and effects .................................................................................................... 203
Building a track matte hierarchy .......................................................................... 204
Unmultiplying mattes and other tips ....................................................................... 210
Mattes for custom transitions ................................................................................ 212

12 **Stencils and the “T”** ............................................................................ 214
Stencils explained; luma versus alpha stencils; silhouettes ................................. 214
Preserve Transparency; glints; Alpha Add mode ................................................... 217

**Cameras! Lights! Action!**

13 **3D Space** ....................................................................................... 220
The Z dimension ...................................................................................................... 220
Rotation and orientation in 3D ............................................................................... 223
Z scale; offsetting the Anchor Point in 3D ............................................................ 224
Camera and orthogonal views; multiple comp views ............................................. 226
Layer axes handles; Local, World, and View Axis Modes ....................................... 230
3D motion paths; accelerated previews; auto-orient in 3D ..................................... 232
Rendering order issues; intersections; mixing 2D and 3D layers .......................... 236

14 **Cameras** ....................................................................................... 242
Camera basics ........................................................................................................ 242
Pointing the camera; Unified Camera tool; view options ...................................... 244
One-node cameras; animating the camera; Auto-Orientatio................................... 248
Camera rigs; animation advice ................................................................................ 252
Editing between multiple cameras ........................................................................ 256
Camera settings; angle of view; depth of field ...................................................... 257

15 **Lighting in 3D** ............................................................................... 262
Light basics; rotating lights ................................................................................... 262
Light parameters and types of lights ...................................................................... 268
Layer Material Options ......................................................................................... 273
Creating and managing shadows ........................................................................... 276
Light Transmission; creating gels and gobos ......................................................... 280
Faking reflections .................................................................................................... 285
Adjustment Lights; relighting footage ................................................................... 288
Building Hierarchies

16 Parallel Worlds .............................................. 290
  2D versus 3D layers ........................................ 291
  Different types of 3D layers .............................. 292
  Casting 3D shadows onto 2D layers ....................... 294
  3D Shadows for 3D Effects .................................. 296
  Vanishing Point Exchange .................................. 298
  3D model import using Photoshop Extended ............. 301
  Adobe Repoussé ........................................... 304
  Digieffects FreeForm ...................................... 306
  Third-Party 3D Plug-ins sidebar .......................... 310

17 Parenting Skills ............................................. 312
  Parenting basics ........................................... 312
  Parenting exercises ........................................ 314
  Parenting: Under the Hood sidebar (the math behind parenting) ........................................ 316
  Null Objects .............................................. 318
  A Skewed Perspective sidebar (nonuniform scaling issues) ........................................ 321
  Parents in Space sidebar (grouping 3D layers) .......... 322
  Jump parenting ............................................ 323

18 Nesting Compositions ........................................ 324
  Nesting basics ............................................. 324
  Effects and nesting ........................................ 327
  Nesting and editing a video sequence ...................... 328
  Using oversized comps (motion control techniques) .... 329
  Creating and navigating chains of nested comps .......... 330
  Edit this/look at that; flowcharts ......................... 333
  Nesting options and tips .................................. 336
  Rendering order issues; problem solving .................. 338

19 Precomposing .................................................. 342
  Precomposing to group layers ............................ 342
  Leave All Attributes versus Move All Attributes ....... 343
  Fixing render order problems ................................ 346
  Clipped layers; trimming “empty calories” ................ 348

20 Collapsing Transformations ................................. 350
  Maintaining resolution .................................... 350
  How collapsing changes the rendering order ............. 352
  Special cases and interactions; recursive switches ....... 354
  Collapsing nested 3D comps ................................ 358
  Continuous rasterization of vector artwork, text, and solids ........................................ 361
  Continuous rasterization and effects ....................... 363
Text Animation

21 Textacy ........................................... 364
Creating, editing, and formatting text using the Type tool ........................................... 365
Fill & Stroke Options sidebar ........................................... 367
Paragraphs of text ........................................... 368
Text along a path ........................................... 369
Creating a Text Animator; the Range Selector ........................................... 370
Randomize Order sidebar ........................................... 372
More on animated properties ........................................... 373
Cascade-style animations ........................................... 374
Per-character 3D including auto orientation; text in 3D space ........................................... 376
Source Text Tricks sidebar (Source Text keyframes, expressions, and scripts) ........................................... 381
Animator Shapes; Ease High and Ease Low ........................................... 382
More on the Advanced section; animating property values ........................................... 384
Anchor Point Grouping and Alignment; blending modes ........................................... 385
The Wiggly Selector ........................................... 386
Modes of Confusion sidebar (selector modes) ........................................... 387
Managing multiple selectors and animators ........................................... 389
Exporting text to SWF; converting Photoshop text ........................................... 392
Create Outlines ........................................... 393

Effects & Presets

22 Applying and Using Effects ........................................... 394
Applying effects ........................................... 394
The Effects & Presets panel; searching for effects ........................................... 395
Common effect controls ........................................... 397
Animating effects; effect point paths ........................................... 401
Copying and Pasting Effects sidebar ........................................... 403
Effects that use mask paths ........................................... 404
Render Settings ........................................... 404
CC Composite sidebar ........................................... 405
Adjustment Layers including masks, alpha channels, and blending modes ........................................... 406
Applying effects to solids ........................................... 410
Layer Styles sidebar ........................................... 412

23 Effects Roundup Overview ........................................... 414
A quick reference for which chapters discuss which families of effects.

23B Effects Roundup (Bonus Chapter PDF on DVD)
Tips on well over 100 of the effects that come with After Effects CS5, organized by category. Includes a sidebar on 16-bit-per-channel mode and effects.
24 Compound Effects

- How compound effects work
- Compound Blur
- Texturize; managing maps using nesting and precomposing
- Displacement Map
- Troubleshooting

25 Presets and Variations

- Saving and applying Animation Presets
- Presets and masks
- Presets and effects
- Browsing the factory presets using Adobe Bridge
- Text presets; saving text styles
- Behaviors
- Brainstorm

26 Color Management

- Overview of color management; Project Working Space
- Input profiles
- Output profiles
- Display management; output simulation
- Apply Color LUT (look-up table)
- Scene-referred profiles
- Luminance range issues; Match Legacy Gamma sidebar
- Linear blending
- 32-bit floating point and HDR images
- Camera Raw sidebar
- Cineon log space
- RED R3D Settings sidebar
- Broadcast safe colors

27 Keying

- Keying approaches
- An overview of the different keying plug-ins
- Keylight tutorial
- Color correction and edge improvements
- Light wrap technique

27B Color Difference Keyer (Bonus Chapter PDF on DVD)

A tutorial on how to use the most powerful of the Adobe keyers.
### Time & Tracking

#### 28 Frame Rate Manipulation
- Time stretching ........................................ 474
- Reversing layers ....................................... 476
- Time Remapping; freeze frames ..................... 478
- Manipulating the timing of clips ..................... 482
- Manipulating keyframed animation, sequenced layers, and nested comps .... 485
- *The Real Out Point* sidebar; frame sequences and step-frame animation .... 488
- Frame Blending, including Pixel Motion and Timewarp ....................... 490
- Render Settings; blending advice ..................... 492

#### 29 Motion Stabilization
- Overview of the motion tracker/stabilizer, including options and settings .... 494
- Tracking and applying a stabilization .................. 499
- *Masking and Motion Stabilization* sidebar ............. 501
- Stabilization practice and advice ....................... 502

#### 30 Motion Tracking
- Tracking Position, including working with the Attach Point .................. 506
- Tracking Scale and Rotation ................................ 509
- *Effect Track* sidebar (applying a track to an effect point) ................. 510
- Exercise on multipart tracking ................................ 511
- *Motion Blur* sidebar ...................................... 514
- Corner pinning exercises ................................. 514

#### 31 mocha
- Performing a track ......................................... 520
- Perfecting the track using AdjustTrack mode ................... 522
- Exporting a track to After Effects ......................... 523
- mocha shape workflow ..................................... 524

### Drawing, Painting, & Puppetry

#### 32 Shape Layers
- Shape tools and options ................................... 528
- Working with parametric shapes ......................... 530
- *Shaping as You Drag* sidebar (keyboard shortcuts while creating shapes) .... 532
- Working with pen path shapes; free transform; open paths .................. 533
- Strokes, Fills, and Gradients ................................ 535
- Line caps, corners, and segments (dashed lines) ........................ 537
- Managing multiple shapes; *Intersections and Holes* sidebar ....... 538
- Grouping; Merge Paths ..................................... 540
- Shape effects ............................................. 542
33 Paint and Clone ................................................................. 554
Getting started, editing and managing strokes; Paint on Transparent .......... 554
Transforming Brush Strokes; Channels; Modes ................................ 558
Eraser tool; erase Paint Only and erase Last Stroke Only options .......... 560
Animating strokes; using Write On mode; replacing strokes ................. 562
Painting (rotoscoping) frame by frame ................................... 564
Brushes and Tablets sidebar .............................................. 565
Interpolating brush strokes .................................................. 565
Effects and Paint sidebar .................................................... 567
Clone Stamp tool; Clone Presets; Clone Source Overlay; Source Time Shift 568
Using motion tracking and expressions to automate cloning ................. 572
Other tips including painting in a straight line and revealing a title .......... 575

34 Roto Brush ................................................................. 576
Roto Brush workflow ......................................................... 576
Creating a base frame .................................................................. 577
Propagation settings .................................................................. 580
Techniques for spanning an entire shot ........................................ 582
Refining the matte .................................................................. 584

35 The Puppet Tools ......................................................... 586
Puppet Pin tool ..................................................................... 586
Keyframing pins; motion sketching pins ...................................... 588
Overlap tool ......................................................................... 590
Starch tool ........................................................................... 592
Mesh Issues sidebar ................................................................ 593
Multiple shapes in a mesh; deforming text exercise ...................... 594

36 Working with Audio ............................................................ 596
Reading audio waveforms; spotting audio ................................... 596
Controlling audio levels .......................................................... 600
Previewing Audio sidebar ..................................................... 601
Mixing audio including fades; avoiding clipping distortion ............. 603
Trimming audio layers ............................................................ 605

36B Audio Effects (Bonus Chapter PDF on DVD)
An overview of the most useful audio effects.
### Expressions

#### 37 Expressions
- Creating expressions, including using the pick whip; basic math
- \textit{Convert Audio to Keyframes} sidebar
- Mixing and matching parameters, ranges, and dimensions
- \textit{Interpolating This to That} sidebar (matching value ranges)
- Controlling expressions; saving expressions as presets
- Building more complex expressions
- \textit{Expression Language Menu} sidebar
- The wiggle expression

#### 37B Deeper Modes of Expression (Bonus Chapter PDF on DVD)
An extensive review of useful expression methods, JavaScript math functions, and programming tips. Includes numerous examples.

#### 37C Scripting Overview (Bonus Chapter PDF on DVD)
Controlling After Effects with scripts. By Dan Ebberts.

### Importing & Integration

#### 38 Import and Interpret
- Importing different media types; alpha channel types; missing codecs
- Importing from Photoshop & Illustrator
- Importing projects
- Interpret Footage settings; Interpretation Rules

#### 39 Integration 101
- Web integration tips, including GIF, PNG, SWF, FLV, and F4V
- Flash Professional integration
- NLE integration tips, including Premiere Pro, Avid, and Final Cut Pro
- Adobe Dynamic Link
- \textit{Buttons for Adobe Encore} sidebar
- Device Central integration (mobile media)

#### 40 Integration with 3D Applications
- Importing camera moves
- Aligning objects and coordinate systems
- Creating mattes; frame rate and size issues
- Videowall exercise, including Cinema 4D export
- \textit{Multipass Rendering} sidebar
- Integrating shadows exercise

#### 40B 3D Channel Effects (Bonus Chapter PDF on DVD)
A review of the 3D Channel Effects for file formats with extra data channels.
